

### Entaniya Fisheye

**The Entaniya Panoramic Kit for GoPro is designed for use with a Back-Bone RIBCAGE modified GoPro camera fitted with an Entaniya extreme Fisheye lens.**

The system enables you to take panoramic VR photos simply and easily. **The No Parallax Point (NPP) is fixed when the camera is fitted on to the mount.** You just take photos front and back and use Entaniya's free Entapano Photo (also Ptgui & Autopano) software to convert the images to equiangular format. Monopod not included.

The NEW Entaniya ENTAPANO range of Fisheye lenses achieves unique wide-angle images well beyond a normal field of view. The current range covers 220°, 250° & 280° and are designed for 360 degree image capture using devices like the **Back-Bone Ribcage modified GoPro 1/2.3" CMOS camera.**

Other Entaniya Rigs:

ENT-RIG1 280° 1 Camera rig

ENT-RIG3 3 Camera rig

ENT-PANO Panoramic Mount Kit

Simply take photos front and back.
