

Entaniya Fisheye

The NEW Entaniya HAL range of Fisheye lenses for large sensor cameras achieves unique wide-angle images well beyond a normal field of view.

The current HAL lens range consists of focal lengths of 200° & 250°. These lenses are designed for 360 degree image capture using cameras from **Blackmagic, JVC, Olympus, Panasonic, RED, Sony, ZCAM, and many more.**

Entaniya manufacture a range of adapter mounts to enable HAL 200 and 250 lenses to fit on these cameras. The current range of adapters are listed here.

The combination of lens, rear optic and mount is critical to get the best images. Please contact SeeSense for advice about the best adapter to use with your camera.

Please contact SeeSense for further details of the Entaniya range and 360 VR systems offered by SeeSense:
