

BACK-BONE FROM GoPro HERO to SUPERHERO!

The Back-Bone Ribcage H8PRO is a **professional upgrade** of the GoPro Hero 8 Black camera that enables users to fit a wide range of **S (M12), CS or C-mount lenses** on to the camera. Large format lenses can also be fitted by using optional adapters.

The modified Back-Bone camera retains all of the original electronic features of the camera but creates a much more professional solution. The camera can output a clean 4K/30 when used with the optional GoPro Media Mod.

BackBone modified GoPro cameras are an established tool used in a wide range of Film & TV Production, Medical, 360VR, Timelapse and Industrial applications and is suitable for applications from microscopy, macro work to astronomy and everything in-between.
